## Is your EHR system operating at peak performance?

**ePath**

Pathway Health's experienced clinical consultants will conduct an off-site, detailed analysis of your EHR system to ensure it is being utilized to its fullest potential. We offer the following ePath reviews:

### End User Review

Examines portals, dashboards and key clinical documentation to ensure nurses and the interdisciplinary team are utilizing the software appropriately and efficiently.

### General Configuration Review

Inspects the key configuration areas of the software to ensure the system is set up to encompass proper workflows and attains the full capabilities the program has to offer.

### Focused Orders and eMar Review

Takes an in-depth look at your orders portals, custom template libraries, order sets and eMar configuration.

### Focused ADL/CNA Documentation Review

Performs a focused review on the Point of Care configuration and utilization to determine if proper programs are in place to efficiently capture ADL and critical MDS-related data.

### Assessment/Workflow Review

A comprehensive review of vital clinical systems, such as the admission/discharge process, skin protocols, bowel and bladder protocols and behavior management. Pathway Health will also review up to five forms of assessment to examine triggers, rules and workflow capabilities.

Reviews can be purchased a la carte or as a comprehensive package. Each review will include suggestions on how to better utilize your system. After the review is complete, you can work directly with one of our trained ePath experts to develop an action plan to configure your system or retrain your staff for optimal use.

**Get the most out of your EHR system with ePath.**
